Install with speech synthesis

Auto capture keyboard ... ✕

You have the **Auto capture keyboard** option turned on. This will cause the Virtual Machine to automatically **capture** the keyboard every time the VM window is activated and make it unavailable to other applications running on your host machine: when the keyboard is captured, all keystrokes (including system ones like Alt-Tab) will be directed to the VM.

You can press the **host key combo** at any time to **uncapture** the keyboard and mouse (if it is captured) and return them to normal.

Software selection

At the moment, only the core of the system is installed. The default selections are its standard desktop environment and the default tools.

You can customize it by choosing a different desktop environment or a different collection of tools.

Choose software to install:

- ☒ Desktop environment [selecting this item has no effect]
- ☒ ... Xfce (Kali's default desktop environment)
- ☐ ... GNOME
- ☐ ... KDE Plasma
- ☒ Collection of tools [selecting this item has no effect]
- ☒ ... top10 -- the 10 most popular tools
- ☒ ... default -- recommended tools (available in the live system)

Install the GRUB boot loader

It seems that this new installation is the only operating system on this computer. It is recommended to install the GRUB boot loader to your primary drive (UEFI partition/boot record).

Warning: If your computer has another operating system that the installer fails to detect, the resulting operating system temporarily unbootable, though GRUB can be manually configured.

Install the GRUB boot loader to your primary drive?

☐ No

☒ Yes

Screenshot

Install the GRUB boot loader

You need to make the newly installed system bootable, by installing the GRUB device. The usual way to do this is to install GRUB to your primary drive (UEFI) instead install GRUB to a different drive (or partition), or to removable media.

Device for boot loader installation:

Enter device manually

/dev/sda (ata-VBOX_HARDDISK_VBa31c629b-10fc2cd9)
