PAGE No. _____

Commands →

ls - list files & folders

pwd - shows the current folder

cd - change directory

ls -L - detailed list

• ls -la - hidden files

Moving b/w directories

• cd Desktop - go to desktop

• pwd - check location

• cd ~ - go back home (go directly to home)

• cd Downloads - go to downloads

• cd .. - go one folder back (direct)

• cd - - go to previous folder

File & Directory permissions (chmod, chown)

• Create a file

touch intern.txt

nano ← writes text
intern.txt

• check permission - ls -l

we will see in output -

-rw-r--r--

r - read

w - write

x - execute

`chmod` - make file executable

`chmod +x intern.txt` - execute

`chmod -x intern.txt` - remove execute permission

Give full permission

`chmod 777`

`-rwxrwxrwx`

777

$\begin{array}{|l} \hline 1 \text{ others} \\ \hline 2 \text{ group} \\ \hline 2 \text{ owner} \end{array}$

read (r) = 4

write (w) = 2

execute (x) = 1

$$7 = 4 + 2 + 1 = rwx$$

owner - can read, write, execute

group - " " "

Others - " " "

- 755 = `rwxr-xr-x` (common for programs)
- 644 = `rw-r--r--` (common for files)
- 700 = `rwx-----` (private)

`chown` - change ownership

`sudo chown root:root intern.txt`

`ls -l`

Package management

- apt update - refresh package list
- apt upgrade - update installed software
- apt install - install software
- apt remove - remove software
- apt search - search for packages
- dpkg -l - list installed packages

Networking commands

ifconfig - shows network interfaces and IP addresses.

ping - test connectivity to host (another)
ping 8.8.8.8

netstat - shows network interfaces & IP addresses.
netstat -tulnp

traceroute - shows path packets take to a destination.

ip route - shows routing table.
